Click the arrow to expand or collapse the layers. • Each of your layers also has a `_Layer Mask_` that allows you to temporarily mask, or hide, individual layers. In Figure 3-2, the circle with a plus sign depicts a layer mask that is set on a group of layers. The circle with a line through it means the layer mask is set on an individual layer. The screenshot below shows the layer mask's box outline in action. FIGURE 3-2: Use the Layer Mask window to control how all your layers are grouped. • The Layers panel enables you to drag and drop layers together to create new groups. Click the New Layer icon to open the New Layer dialog box. As you move layers around, you can also change the way they're grouped or moved via keyboard shortcuts. • The Color panel enables you to toggle on or off specific colors, change colors, adjust the brightness, and add color overlays to your image. • The Adjust panel contains items used for fixing problems or enhancing your image. You'll find an extensive array of enhancement and distortion tools, along with the built-in photo-editing features that I describe in the next section. • The Window menu controls your view, such as where objects are positioned in the image (as in the top image in Figure 3-3) and the opacity of elements. FIGURE 3-3: The Window menu reveals all the cool tools you can use to edit your image. • The Pixel menu controls your view, which includes things such as the percentage of enlargement, pixel-based resolution, and the size of the image. • The

Brushes come in various shapes and sizes. Brush tips come in several colors. The brush tip determines the speed of the brush motion. To get started, a brush tip is selected, and the brush options screen is activated. At the bottom of the brush palette are additional brush tip options. Image 1: Click the Tool Options button at the bottom of the brush palette to access brush settings. To adjust the width of your brush, click the Width box and enter the appropriate value. Width is measured in pixels, so greater widths mean greater brush strokes, or strokes with larger areas. To adjust the length of the brush, click the Length box and enter the number of pixels you want. A longer brush will have greater coverage, while a shorter brush will have smaller coverage. To adjust the pressure of the brush, click the Pressure box. The brush pressure indicates the intensity of the brush movement. A lower value is better for fine detail, but a higher value is better for a broader stroke. Image 2: The Speed option adjusts the brush speed. For more details, click the Help button. The Flow option allows you to change how the brush strokes are rendered in the drawing. The options are: Flow Paint: Uses the Flow Paint algorithm to build up the brush strokes, which is good for applying fine detail. Flow Sculpt: Uses the Flow Sculpt algorithm to build up the brush strokes, which is good for applying overall brush strokes. Shadow's opacity is controlled by the Opacity box. Click the arrow to access Shadow and Gradient controls. Image 3: To adjust Shadow, click the Shadow box, and enter the amount of Opacity you want for the shadow effect. Q: Why is IE 8 attempting to open wierd images? I have a variety of IE 8 compatibility problems but these are the worst of them. When selecting images from a variety of web sites, IE 8 attempts to download them and then try to open them in a strange way: Images are usually ugly (or at least is bad IE) It happens over and over again i.e. IE 8 will be stuck on each image and not proceed to the next one in the list. I had a look in the event log and nothing caught my eye, but has this ever happened to anyone else? How can I find out what's causing this problem? A: I believe I have solved this myself by having a look at the Event Log and determining the time this started occurring. It was happening several times an hour, which is almost daily. The next step was to examine the files in question and search for corrupt files or "bloatware" of some kind - something that slows IE 8 down. With a file cleaner, I found a couple of issues. I also had the WMP plugin for IE, which appeared to be trying to load an image, which was not playing nice with IE 8. So I disabled WMP, which stopped the issue. I re-enabled WMP and the issue has not re-appeared. Point[data]}], {x, 1, 60}, {y, 2, 8}, {z, 1, 10}]` But my plot is coming automatically with some extra data values. I want this data points to be deleted. This is the pic for those extra data points A: ListPlot3D returns the data with the default plotting style. With ListPlot3D[...] you can specify
