Tickets for the Montreal edition have already gone on sale. The 2017 VOCAL and ALL FOR ONE Tourivals are an introduction to the national and international competitive schedules of the two events that will continue next year. Nate Porco will join the show this year as an exclusive artist to the music program and will open the show with his own set. Dental erosion, a condition involving loss of dental enamel, develops when the normal pH of the oral cavity is reduced, leading to the formation of dental lesions, known as dental erosion. Erosion may involve different tooth surfaces, including smooth surfaces, proximal surfaces and occlusal surfaces of the teeth. The lesions usually appear on non-functional surfaces of the teeth, but can also appear on the occlusal surfaces, where food impaction normally occurs. The rough surfaces form dental pellicle, which can provide a soft surface for incipient erosive damage. Erosion may lead to enamel loss, secondary dental caries, gingivitis, and eventually loss of the entire tooth. Dental erosion is a common form of dental disease. Whereas most people brush and floss their teeth, a small percentage of the population has poor oral hygiene habits and is at a greater risk for dental caries and erosion, since poor oral hygiene can lead to periodontal disease and dental erosion in the first place. It has been estimated that, in the United States, 10% of the population suffers from moderate to severe dental erosion. Frequently, the only problem with the patient is discovering the condition. It is often undiagnosed and/or untreated until a significant amount of tooth substance has been lost. In some cases, the patient does not seek treatment because the condition is not detected, or at least not immediately detected. The etiology of dental erosion is complex, with multiple contributing factors. Major contributing factors may include: chewing; the presence of hard, indigestible or rough
