

The Batch User Manager application provides the easiest, fastest, and most cost-effective way to get local accounts under control in your organization, whether you have twenty computers or twenty thousand. Batch User Manager is used by corporations and organizations around the world, including AT&T, Stanford University, Saab, Siemens, the University of Maryland, the State of Ohio, Toyota, Tupperware, UNICEF, Wells Fargo, and the US Army. With Batch User Manager, you can instantly rename local user accounts, change their passwords, or enable or disable them, across dozens or even thousands of Windows servers and workstations in one simple operation. Large-scale operations that used to take hours can be done in seconds. Every operation is logged in XHTML format, easily read in any web browser and specifically designed for use in Microsoft Excel and Microsoft Word. No matter what your situation, we can help. Do you need to change the local Administrator account passwords on three thousand machines? Or was your last IT guy a nut, and did he deploy a bunch of machines with local Administrator accounts named "Tito?" Or did your default Windows install leave an extra user on every machine, which now needs to be disabled? Don't worry. Batch User Manager can handle it. Its operation is simple and direct: - Select your Windows domain and enter a local username or group. - Batch User Manager will list all matching machines. - Select the machines you wish to affect. - Enter a new username, password, and/or specify if you would like to enable or disable the accounts. Batch User Manager makes the changes and produces a detailed log in XHTML format. There's no need for complicated, custom scripts or separate logging procedures. Just click and go. And with its ability to find even hidden machines on your network through a tightly-written, massively-parallel, nearly-instant ping scan, you can rest assured that all of your passwords have been changed. By limiting its operation to a simple set of the most commonly-needed account management tasks, Batch User Manager makes everyday administration easy: - Finding all of the computers on your network - Renaming accounts - Changing passwords - Enabling accounts - Disabling accounts A: I'd recommend using Active Directory Administrative Center. It's a free tool that manages multiple AD domains for you. Your OS's built-in

What's New in the?

Uninstaller, decompiler, perusal, and analysis tool, that can optionally print all the text found in a PE file, and has a built in decompiler for the two most common files in Windows32 and x86-64, and a custom decompiler for a custom filetype. Unpacker, decompiler, and analysis tool, that can optionally print all the text found in a PE file, and has a built in decompiler for the two most common files in Windows32 and x86-64, and a custom decompiler for a custom filetype. Description: I think these programs are useful, but I'm not really sure how many people use them. I find the most useful of these tools is PE Explorer, however this tool seems to be abandoned. I haven't used this tool in years and I'm afraid that it's maybe been discontinued. I've also heard good things about the PE tools from Sven Hasselbach. These tools are in their infancy so it's difficult to get a full understanding of how they work. You might want to file a question in the forums for the PE tools. I would file it under our question about malware programs/tools, but that seems like a huge subject. These tools are in their infancy so it's difficult to get a full understanding of how they work. You might want to file a question in the forums for the PE tools. I would file it under our question about malware programs/tools, but that seems like a huge subject. Malware programs/tools is a bit too broad to ask about. The "how do these work" part would be too broad for us to answer and it's also not really that important as most of the information on these tools has been outdated. More likely we'll just delete these questions. That's fine. My question is more related to the PE Tools as I can find no other public resource on these utilities. I just think these tools could be useful for people who don't know any better, but it's also useful for people who are already into this area to provide some direction. You're probably right, however I think that if people are willing to play the game of guessing what the tools do, then they'll find enough answers on the forums. That's fine. My question is more related to the PE Tools as I can find no other public resource on these utilities. I just think these tools could be useful for people who don't know any better, but it's also useful for people who are already into this area to provide some direction. You're probably right, however I think that if people are willing to play the game of guessing what the tools do, then they'll find enough answers on the forums. I agree with you. I have no idea what any of these tools do, but I would imagine that they can

System Requirements:

Memory: 128 MB required, 256 MB recommended Graphics: OpenGL 2.0 (graphics card with shader model 3.0 or better) required Minimum Resolution: 1024x768 Maximum Resolution: 2560x1600 Minimum Antialiasing: Antialiasing is not supported on 2.0 hardware Windows XP or later, Linux (incl. Ubuntu) Mac OS X (10.3.9) or later Minimum System Requirements for OS X: Memory: 128 MB required, 256 MB
