Divided by Columns into Different Variables I want to take the name of a player (in this example, 'Ronald') and divide it into 'givenName', 'middleInitial' and 'surname' like this...

```
var userNames = ['Bob',  
  'Steve', 'Ronald']; var  
  nameIndex = 0; var  
  userNames = ['Bob',  
  'Steve', 'Ronald']; var  
nameIndex = 0; console.lo  
g(userNames[nameIndex])
```

---

```
; nameIndex = nameIndex  
+ 1; console.log(userNames  
[nameIndex]); I want  
the output to be:  
givenName: Bob  
middleInitial: surname:  
Steve What would be the  
best way to accomplish  
this? I'd want to be able to  
put an infinite number of  
players in this array and  
have each name assigned  
to the appropriate  
variable. A: You could
```

---

use.map(), then push the name elements into an array. You can then loop through the array and push the name elements into the appropriate variable.

```
var userNames = ['Bob', 'Steve', 'Ronald'];  
var nameIndex = 0; var  
    names =  
    userNames.map(s =>  
        s.split(' '));  
names.forEach((name,  
    nameIndex) => {
```

---

```
console.log('givenName:' +  
name[0]); console.log('mid  
dleInitial:' + name[1]);  
console.log('surname:' +  
name[2]); } );
```

There's never enough time to get everything done and the speed at which technology is developing means that you're going to be left behind if you don't keep up. We don't have a lot of time to worry about the nuances of our health and
