To get the best image effects, information about the picture is a must. With the Smart Preview a lot of things can be calculated automatically. Again a great feature! Of course the photo card can provide them and maybe you should carry it with you. Some of the algorithms are really impressive, the focus can be changed, exposure can be adjusted and many more. But it also takes much time. On a 4 K screen you can see that the Preview is working on the images and is also calculating corrections. Maybe not the best idea to carry the iPad to work. I guess for actions the usage of smart previews is even more desirable. For the latter it has to be tested. Think about the scenarios, where you work on your Photoshop images in real time as they're coming out of the camera. Actually, when you are working, you can't imagine that there's a time when you can't view the image on your iPad. Flexibility and Accessibility are the qualities of the iPad which are always required in the field. I highly recommend that you need a 15 page thickness when editing images by iPad. I used a pencil case and a large format camera viewer. No problem in that case. The next most significant major release from Adobe is Photoshop CS6. With the release of Photoshop Elements 14 came the first significant step for Adobe to offer holistic features. While Elements 14.0 suffered from being a leap forward, CS6 is basically an upgrade of the first version. With smart previews you can preview the effects of global adjustments like tone and curves. But the Lightning lightning is not the only thing you can preview. Cubic curves bring a completely new dimension, the preview of the image as a Portrait lets you know if the curves are located correctly. A smart rectangular selection or rectangular face recognition can

identify what you selected and know related colours for the dark parts of the image. If you are working with a picture of an animal you can quickly see if you have measured the length and width correctly without having to look at the display of the ruler. For the right adjustment weight, the previews of a Smart Sharpen and Face Detection enhance the image.

Adobe software is available at more than 93,000 retail locations throughout the world, and more than 35 million people use our products and services online.

Adobe Photoshop is the industry standard for photo editing and production. It's available for a monthly or yearly subscription fee and offers a large number of tools that allow you to quickly mock-up your content. To get started with Photoshop it doesn't take long to download the plug-ins you'll need. It's also intuitive and easy to use. That opened a whole community of Photoshop users of all skill levels missing from the editor's social vision. Now,

with **Share for Review** and other features, Photoshop has a new vision: to ensure that people who work with it are always connected, collaborating on projects from every device. • Reduce human error: With the new feature, it becomes much easier to “review” and verify edits by other collaborators. This helps to avoid mistakes and misunderstandings when multiple people are working together on the same image—all in the same email. • Share for improvement: Anyone creating an email in Photoshop can now share that email in a new email thread, making it easier for collaborators to “comment” on the work made inside Photoshop. Photographers can now easily collaborate on images on a shared Google Drive space, and everyone can collaborate on a Google Doc. • Look Back: All Photoshop emails can now become version logs, enabling anyone to go back in time and easily access versions of the same email, so you can see that everybody got a copy of an email. Photoshop is a visual editor, and these are visual changes, so a version log makes that visual feedback possible even in email.]
