Adobe's strategy to create a new native GPU API for native graphics rendering and a new native API to call APIs from the web in order to achieve a more stable experience on the desktop and mobile devices. With these

native APIs in place, web and hybrid applications can use the new APIs to render 2D and 3D graphics natively, eliminating the need to leverage third-party libraries. This new native GPU API approaches the state of the art in terms of API performance and stability, and it will be the native foundation of the 5+ year roadmap for mobile, desktop, and web applications. Today on Day 2 of MAX, Adobe announced the upcoming release of Photoshop 2020 in early 2020 followed by the release of the new Create panel in late 2020. The Create panel will enable authors to collaborate, show off and share their creations easily with viewers across the web in interactive web and web mobile experiences. Along with a new native GPU API, the desktop CS+ version of Photoshop will retire its legacy 3D toolset feature set. This will enable advanced digital artists to continue being a key contributor to the evolution of advanced content creation and convey the story of a subject using the tools that are native to their skillset to the best of their abilities. There are a number of plans Adobe is working on to make Photoshop a better tool across desktops, mobile and the web. The main objective is to enable a more robust platform that drives continued innovation, with the goal of a single, universal file format across all devices, supported by a creative document platform.

Photoshop's ability to edit and alter the colors of an image is one of the most touted features of Photoshop. Whether it's for photo enhancements or to fix a color balance, Photoshop is the tool to edit any color-oriented situation. One of the key reasons you should consider upgrading your knowledge of Adobe Photoshop in 2019 would be because of the serious differences in the Creative Cloud and trials programs. You no longer have the option of not having your data shared with other users, and running through trials for longer periods of time. As a business owner or freelancer, you can now get commercial licenses for Photoshop CC via the Creative Cloud. They are not always very affordable, however, there are usually discounts available if you are willing to pay a few extra monthly fees. In addition to features such as photo enhancements, you will also benefit from a deeper editing and retouching of a photo as well with its advanced masking tools and the ability to adjust the color of your image no matter the context. Categories of uses for different software tools change over time. It may seem like immersive feature-packed versions are always the newest addition, however, it's not always the most useful. Take for example, the Creative Cloud. An upgrade may mean you get a new tool entirely without the option of returning when

you're done. The content creation world is vast. There is a plethora of different uses for images, video and photo editing to make your content shine. Take, for example, making an infographic or an expanding Visual Story. Your ability to add transitions to images, edit to a high degree and be able to connect to a story are the key things that attract people to use your content.

Berlin, Germany – 24 September 2019 – As a web-based service, Photoshop on the web brings together the industry-leading Photoshop features for creating and delivering outstanding images across displays and the web. By unifying the workflow, Adobe created a more intuitive and powerful digital design experience that inspires and empowers Adobe's customers to create great work across devices. Adobe is building on its powerful image editing and design capabilities to bring some much needed added value to the web as Adobe rolled out Photoshop on the web to its paid Creative Cloud subscribers on September 2. "We know that the web is a powerful new canvas for creative professionals, and we are committed to providing professional-grade tools for the web to inspire and inspire wonderful things." noted Kirill Levchenko, Chief Product Officer of Adobe Cloud and chair of Adobe MAX. Adobe has been working on this update for years and several product teams, including the Adobe Creative Cloud team, collaborated on this web-based experience. Now in beta, Photoshop on the web will be available for both Mac and Windows platforms and includes a broad array of new features and capabilities. These new features are driven by Adobe Sensei, a new AI-powered deep learning engine that helps Photoshop deliver intelligent, context-aware results. The beta release includes exciting new features and

capabilities including Image Inspector , which enables you to investigate an image to quickly bring out the best of it. This tool is more powerful in beta as it now shows how you can enhance the appearance of any image, establish traceable lines for accurate selections, and manage colors with a dramatic new look. In addition, Adobe's Content-Aware Fill feature now adds a One-Click Delete and Fill tool to remove and replace objects in images and deliver more accurate composites with one crisp action.

Photoshop alone has a range of exciting new features in store for 2021. updated features include ReMake Lightroom capabilities, new layers, and new image-based 3D support. The software is also boosted by modern AI and machine learning features, including Group Lightroom's new AI mixer, which will detect the most preferable colour balance for a particular image and automatically adjust it. **Also, if you use Lightroom on a Mac, you can now import your Lightroom catalogs directly into Photoshop.** New features coming to Photoshop for 2021 include lots of new filters, 3D photography tools, easier more efficient workflow, and more. The big new features coming to both Photoshop and Photoshop Elements include: Few, if any, digital imaging or image-processing tools are more adaptable than Photoshop. It's not perfect, no software is, but its sheer volume of features make it unique among the competition. The latest round of updates to Photoshop are coming in late 2020, and the update schedule hasn't slowed down. ReMake Photoshop: Now you can make light processing adjustments to your images on the image itself without going to an external editing program. You'll also be able to copy all the fine adjustments made in ReMake, to individual layers in your orig This feature is already available in Lightroom. ReMake Modify: Now you can make Lightroom-style changes to individual file properties like brightness, contrast and saturation, without touching the full image. For example, you can tweak the brightness of a sky without knowing how the image will look on its original background. This feature will be coming to all desktop and Apple products in 2021.
