The set of features that I tested in the Elements program generally performed well. I used several features in the Expert mode to perform a quick retouch job, such as adding a filter to "Smoke" a picture or correcting the color in a photograph. There were some areas where the software wants to be proactive, such as it's supplementing my photos with suggested stock images. But overall, the Elements features stack up well with most other photo-editing software. I think we can agree that Lightroom has a great number of creative and organizational tools, helping people to take control of their digital images. “While the latest innovations in image editing have come to the desktop, photographers and graphic designers have been asking for even smarter ways to share and edit images on the go, so that is why we built Share for Review,” said Jeremy Miller, Adobe senior vice president of User Experience. “Now, the power and speed of Photoshop is even more accessible and useful on mobile, so photographers and graphic designers can continue to be inspired by photos and videos on their phones and tablets.” Photoshop Share for Review enables anyone to quickly save a shared project in Photoshop. Users simply view a shared project through the web browser and can continue to make edits or even contribute their own edits to the same project, all without leaving Photoshop. Automatically updating edits in the browser also ensures that collaboration remains seamless and unencumbered. Today, experienced Photoshop users can switch the tool inside a browser in just a few clicks. New web browser feature includes a redesigned interface that prompts the user to choose which tool they’d like to use. The browser feature works on any device, including smartphones and tablets, without the need for additional plugins or downloads. Rather than choosing tools from a single drop-down menu, which can be confusing, users gain a more intuitive and familiar feel with tools like ellipse, paint bucket, gradient tool and how to use a brush. The new interface also makes it easier for users to see and edit the changes they’ve made in the past. In addition, the new web browser tool is powered by Adobe Sensei, the framework that Adobe built to make artificial intelligence accessible to everyone. The company has added Full-Facial Recognition technology, and redesigned Adobe Sensei’s facial recognition features to provide a more intuitive experience. Inside the web browser, users can access templates, brushes, and other helpful tools with just a single click and look up a photo or video directly from any image or video sharing platform in a matter of seconds.

The core image filters for Photoshop can now be combined to make complex masks - allowing you to combine two or more masks in various ways for a remarkable combining of content. There will be four new Mask Editing Modes, with one new Mode called Subtract. Once finished, you'll be able to use masks to create color overlays, and new GPU-enhanced composite, blending, and retouching controls. The outline filter has a new 'Vectorize' setting that can be used to turn the result into a vector image to be used for future editing. For now, this is only available in Illustrator, and its effects are limited until Adobe expands it to Photoshop. It's not all about the filter tools in the box - and the next phase of the brand has created a number of exciting new features, including a new 'space up' key, Advanced Filters, a 360-degree Debloater, AU Support, the option to let Photoshop save in the cloud, and other enhancements. Now, Photoshop is arguably the most powerful image editing application to date. However, it is not that easy to get hold of Photoshop.
