ben 10 Omniverse Season 1 | Season 2 | Season 3 | Season 4 | Season 5. The Crow, the Eagle, and The Crawdaddy. Downloading Free mp3 Songs and Mp4 Music Video Songs online @ gettop.com - One of the most popular free music download website. Free music downloads for music lovers. Watch Video Ben 10 Omniverse: English Subbed Dubbed Free Online Q: Why doesn't std::make_pair() take T& as the first parameter? I'm currently in the process of porting our project from GCC to Visual Studio and I've been struggling with some strange errors. We're using the std::map implementation from the STL. It seems that Visual Studio's implementation of std::map is a little different from GCC's implementation. I have confirmed that VC++ does not provide the gcc::make_pair() function I found to easily make pairs from std::pair. I would like to make sure that the function I'm using is the correct way to make a pair from two values. GCC's version of std::make_pair is as follows: struct make_pair { template static std::pair make_pair(const T& x, const U& y); }; The equivalent Visual Studio implementation looks like this: template std::pair make_pair(const Ty1 &, const Ty2 &); Both of these work perfectly well to make pairs. What bothers me is that VC++ uses the reference operator & to denote the second parameter as opposed to the pointer operator & in GCC. I'm able to easily fix this by changing the first parameter from T& to T* but that leads to another problem. The problem is that, when I attempt to std::make_pair (where each parameter is int), I get an error telling me that 'std::pair': members of template argument list are inaccessible due to 'overload resolution'. I suppose that gcc determines the type of the template arguments on the definition of the template and VC++ does it at the instantiation of the template. Does anyone know if that is the case? Thanks.
