Altogether, it is clear that Adobe and Dxo Labs, the entity behind the DNG file format, have been hard at work to make the program easier, faster, and more reliable. While the new UI may not be for everyone, it will definitely present a tremendous progress for Photoshop users. By the way, I believe it is interesting to note that you can also directly control the Installed updates via [This link](#). Coming to the actual features list, you will find many very welcome improvements. New to the Photoshop toolbox is a feature called Content-Aware Move that makes your images, that have been duplicated or merged, more seamless. The process works by stretching or shrinking parts of your images that are out of place. This Content-Aware Move is part of the new Content-Aware Fill tool. Although the photo below doesn't really have too much wrong with it, it is tempting to apply the despeckle filter to remove the small speckles on the face. A Content-Aware Move, however, is best suited for images with severe geometric irregularities or a bad quality. Drag the tool almost anywhere on an image and Photoshop will instantly apply the algorithm. Now this feature may be what you need to finally solve the problem of you exploding head in Photoshop! One of the new features that catches my eye the most is the new Custom Shape tool. Contrary to the fact that this tool has been there for a while in the Creative Cloud, I see it as a valuable addition to the toolbox for professionals. Using the tool, you can accurately stamp a pattern from another image, a font, or even some camera calibration data (i.e. the profile of a lens).

"This release of Photoshop tackles a huge and aging problem for the industry," said Adobe Chief Creative Officer, Thomas Knoll. "Adobe has been digitizing older slide collections for years, but never before has it decided to digitize an entire library. Our team scanned and converted 500 million images made by iPhones in the last 4 years, and that rate is only going up. Older formats are going to be less available as time passes, and we hope that by saving these files now, we can preserve some of them for generations to come." Adobe's new Share for Review features let Photoshop users easily collaborate and review large groups of files or projects without launching Adobe Bridge. This capability makes it possible for teams to work from anywhere, be it a small business, a large corporation, or the pros. For example, imagine a product photography team that needs to assemble several large images for product shots taken from a long road trip. The team can launch Share for Review in Photoshop, and from there, share progress back to their team members. The team can leave a file versioned while they head back to their hotel, and then quickly return to work when they each have a temporary license to use the files. The collaborative workflow can help a client to save any number of files before delivery. As one of Adobe's most innovative brands, Photoshop is the top choice of many creative professionals and artisans who want to produce stunning images for every medium. Photoshop's capabilities continue to evolve as new features are added each year to enhance the overall look, feel and workflow of editing images. Today's update includes a new Depth Map feature to simplify the work of moving, warping, retouching flatten images, and ColorKeying to let users clean up images so that the subject remains sharp. Meanwhile, enhanced three-way color correction improves accuracy and control, Adobe Sensei enhancements include improvements in selection and image search, and the ability to use custom button sets makes it easier to save time across a variety of tasks.
